

EDUCATION

University of Toronto BSc
Bachelor of Computer Science - Specialization in Software Engineering Co-op

September 2016 – August 2021 (expected)

SKILLS

Programming Languages: Java (*Proficient*), Python (*Proficient*), Ruby, JavaScript, C, Bash & Shell (*Proficient*), C# (*Proficient*)

Databases: NoSql, SQL, JSON

Frameworks: Ruby on Rails, Node.js, HTML5 (*Proficient*), CSS3 (*Proficient*), Jekyll, Android Studio, Swagger

Platforms: Linux (*Proficient*), Windows Server (*Proficient*), Amazon Web Services, Docker

Version Control: Git (*Proficient*), SVN (*Proficient*)

RELEVANT EXPERIENCE

Oracle, *Software Engineer Intern*, Toronto, ON.

May 2020 – August 2020

- Developed MVC and Rest Endpoint of a new feature that adds a Content Security Policy Header to all landing pages within the Eloqua Marketing Cloud. Utilized C#, Asp.Net, HTML, CSS, MySQL, Postman.
- Refactored Email Processor Service to utilize MimeKit library in C# which resulted in 40% increased efficiency and accuracy than the old library.

Oracle, *DevOps Engineer Intern*, Toronto, ON.

May 2019 – April 2020

- Written **Sensu** script with 90% accuracy to monitor Oracle servers, services and application health. Utilized **chef** and monitored over 100+ nodes of **Windows, Linux, Kubernetes, Docker**.
- Developed a Web App with 2 other coworkers that includes all dashboards displaying the data of VMs, Pods, DBs and their current status using **Ruby, Angular JS, Jira API, MySQL**.
- Increased productivity by 20% by automating the process of Jira Deployment Tickets creation using **Jira API and Java**
- Experience with migrating, restoring and DB mirroring using **Microsoft SQL Server**.

Tidal Migrations, *Software Developer Co-op*, Toronto, ON.

Jan 2018 – August 2018

- Designed responsive and creative web pages using **HTML5, CSS, Foundation, BootStrap, JavaScript and Jekyll**.
- Fixed bugs for Tidal Web Api using **Ruby on Rails** which filled a quality gap and received customer satisfaction from 4 clients. Built various REST API-endpoints for the users to access their data.
- Designed an automated changelog process using **Node.js, shell scripting, and Git integration** to improve accountability and establish an audit trail.
- Presented a tech webinar about improving internal API documentation practices with **Postman** and **Swagger**.

PROJECTS

Immigrations Analytics Application, Java, JavaFX & NoSql Cloud Database, Maven

- Developed a Java application to centralize collected data for analysis and to generate a semi-annual Scarborough Newcomer Settlement Needs and Trends Report.
- Led 4 person team and participated in an Agile method to develop the application.
- Delivered Data generation and upload, Data cleaning and aggregation, Report generation using querying.

Sales and Inventory Android Mobile Application, Java and Android Studio

- Developed a mobile application with Java SE 8 and Android Studio to create a store inventory system in team of 4. Utilized SVN remote repository version control. Used SQL with Professor-designed Database management system.
