Docker

Version Control

Git

SVN

Relevant Experience

Oracle | Software Developer

May 2020 – August 2020 | Toronto, ON

- Developed a new feature that adds a Content Security Policy Header to all landing pages within the Eloqua Marketing Cloud. Utilized MVC, C# and MySQL
- Refactored Email Processor Service to utilize MimeKit library which resulted in 40% increased efficiency and accuracy than the old library, AE.Mail.Net

Oracle | DevOps Intern

May 2019 – April 2020 | Toronto, ON

- Maintained uptime of QA environments through creation, monitoring and maintenance of web, database, and service serves using Chef and Sensu Monitoring.
- Reduced build failures by 50% in the TeamCity CI pipeline
- Increased productivity by 20% by automating the process of Jira Deployment Tickets creation using Jira API and Java

Tidal Migrations | Software Developer

January 2018 – August 2018 | Toronto, ON

- Designed responsive and creative web pages using HTML5, CSS, Foundation, Bootstrap, JavaScript and Jekyll.
- Fixed bugs for Tidal Web Api using Ruby on Rails which filled a quality gap and received customer satisfaction from 4 clients. Built various REST API-endpoints for the users to access their data.
- Designed an automated changelog process using Node.js, shell scripting, and Git integration to improve accountability and establish an audit trail.

Projects

Immigration Analytics | Java, JavaFX & NoSQL Cloud Database, Maven

Developed a Java application to centralize collected data for analysis and to generate a semi-annual Scarborough Newcomer Settlement Needs and Trends Report

Sales and Inventory Android Application | Java and Android

Developed a mobile application with Java SE 8 and Android Studio to create a store inventory system in team of 4. Utilized SVN remote repository version control. Used SQL with Professor-designed Database management system.

Buxfer | C

Developed a C application that manages student transactions using linked list traversals, structs, and memory allocation. Available on my GitHub.
